Twenty six countries won medals in the 2006 Winter Olympics. The table lists them, along with the number of medals won: gold, silver, bronze and the total.

- **State the WHO, WHAT, WHY, WHEN, WHERE and HOW of the data to the extent known.**
  - WHO: Medal winning countries in 2006 Winter Olympics.
  - WHAT: Medal counts by type: bronze, silver, gold, and total medal count.
  - WHEN: 2006 Winter Olympics.
  - WHERE: Turin, Italy.

- **Try to make a display of the total medal count. What problems do you encounter, how can you organize the data to make the display more successful?**

There is a fair amount of flexibility in creating a useful graphical display for the data. Bar chart of total medal counts may be a place to start but there are too many countries, so the plot would be crowded. A pie chart would do even worse for the same reason. Combining the total medal counts for countries with fewer than 5 medals (12 countries) and making bar chart would make the plot less crowded.
